

COMPANY PROFILE

INTRODUCTION

Idias Corporation Limited was established in 2006 and incorporated in 2014 as a limited company

We are an enterprise IT infrastructure services, software development, systems integration, hosting, data management and IT consulting firm dedicated to providing customized business solutions to our clients

We have been delivering IT solutions to some of the best companies, to solve the most demanding business problems across all industry sectors through the use of technology, processes and people. We offer world-class IT solutions that are championed to add value to your organization, swiftly generate new revenue opportunities and create confidence in your business

We are committed to perfection and that is why so many clients trust us for unprecedented expertise and established solutions

Vision

Our vision is to be a leader in the delivery of end-to-end IT solutions by using technology, processes and people to transform businesses

Core Values

Innovation

We continuously aim to redefine the bar of excellence and quality. We have an error harvesting culture to challenge traditional thinking and drive innovation

Dedication

We go above and Beyond to get the job done, whatever it takes, whenever, wherever. Commitment to customer satisfaction is embedded in our culture

Integrity

We know and do the right thing, for our customers, our team and our company, even when faced with difficult decisions, hard choices and in the face of adversity

Ability

We possess the necessary qualifications, experience, professional credentials and resources to ensure that projects are delivered on time, within budget and according to specification

Skills

Development

We have the right passion and drive to continuously develop our skills and advance our expertise to create value for our customers

PRODUCTS AND SERVICES

Enterprise IT Infrastructure Services

We provide enterprise IT infrastructure solutions required to operate and manage business environments. These components include hardware, software platforms, networking components, operating systems and storages

We have partnerships for the supply and resell of hardware and software from some of the world's famous IT brands. We have access to a large availability of IT equipment such as servers, storage, routers, switches, desktops, notebooks and spare parts from multiple brands such as Dell, HP, Lenovo, Cisco, IBM, Oracle, Juniper and Fujitsu. Our hardware and software supply is covered by a warranty to ensure that you enjoy and realize the benefit of your IT investment without any disruptions

Server Infrastructure

We offer server infrastructure from some of the famous brands including Lenovo, HP, IBM, Oracle, Cisco and Dell

Operating Systems

We support numerous operating systems such as Linux, Windows, Oracle Solaris and IBM AIX

Networking and Security

We offer various network and security products with vendors such as Cisco, Checkpoint, Kemp and F5. We also offer intrusion detection and network penetration testing

Storage and Backup Solutions

We supply, configure and support storages from the world's leading enterprise storage vendors including Lenovo, HP, IBM, Oracle, NetApp and Dell/EMC. In addition, we configure backup and recovery solutions such as Acronis, Veeam, IBM and Dell

Virtualization

We support virtualization technologies such as IBM PowerVM, VMware vSphere, Oracle Virtual Manager and Microsoft Hyper-V

Databases

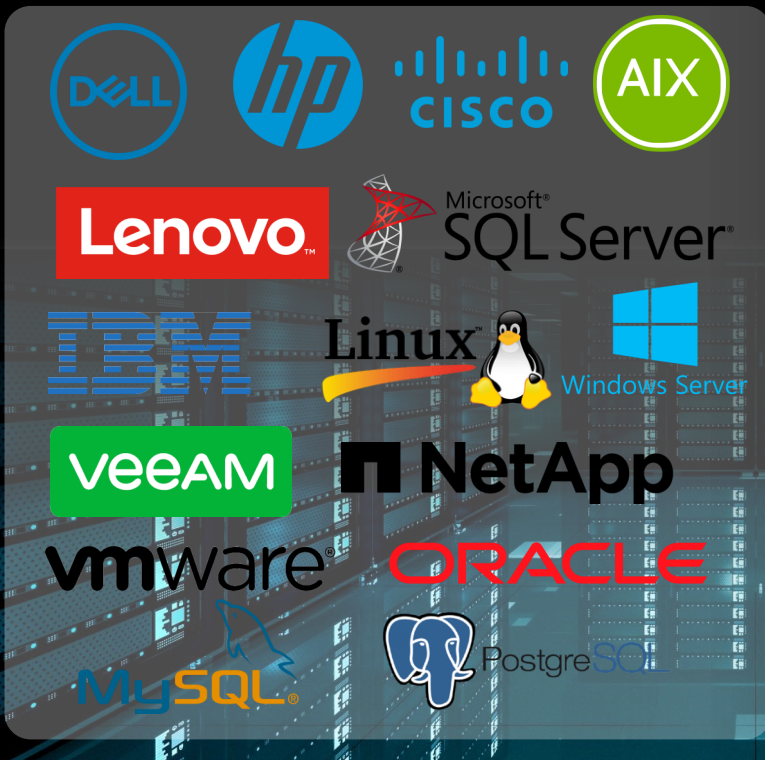

We establish database backup and recovery procedures, provide secure database environments and monitor database performance. We offer database patching, backup and recovery, security, license management and compliance, performance tuning and implementations

Cloud Solutions

We offer cloud solutions from brands such as IBM, Microsoft and Oracle to help organizations in application deployments, integration and disaster recovery

Core Enterprise Platforms

We provide core enterprise platforms such as OneStream for financial reporting, planning and analytics, Oracle Hyperion for planning, budgeting and forecasting and Oracle FLEXCUBE core banking software

Software Development

We develop a complete array of software solutions for all types of clients. Our areas of software development expertise are management information system development; mobile applications development; software testing, maintenance and support; website design and development and user training

Management Information System Development

We harness the power of the web platform and the flexibility of the desktop environment to deliver mission-critical management information systems that improve how your businesses work. We use our vast experience in the development of enterprise-wide software systems to deliver systems which are user-friendly, adaptable and employ security techniques based on industry standards and best practices. Some of the software development technologies used are .NET, C#, Java, PHP, AngularJS, Node.js, Vue.JS, AJAX, CSS, JSP, HTML5, PostgreSQL, MySQL and Microsoft SQL Server

Website Design and Development

From conception and strategy to design and implementation, we create premium websites based on your specific requirements. We incorporate creative graphics that portray the usability and visual of your needs. We use some of the world's leading Content Management Systems such as WordPress, Joomla and Drupal to deliver websites that are interactive, adaptable and customizable

Mobile Applications Development

We integrate mobile apps into your strategy, unlocking the efficiencies of your business. We work with different mobile technologies to create the perfect solution tailored to your business needs and deliver content to multiple mobile platforms (Android, iOS and Windows Mobile)

Software Testing, Maintenance and Support

We provide software maintenance services so that systems continuously remain relevant to support business operations. We carry out various forms of testing at every stage of the systems development process to ensure that developed software modules work correctly as required, work together coherently as one unit and meet user requirements. We also provide localized end-to-end support for all our solutions

User Training

We offer training on all our user-facing applications and also train our clients' IT staff to build their capacity to manage our systems and resolve operational issues. We also provide training services on other off shelf hardware and software systems such as Microsoft office applications, hardware, software, networking, programming languages and operating systems

Hosting

We host web applications, websites and emails as well as register domains. This service is supported by FTP access, daily data backups and 24/7 support

System Hosting

Running a management information system or any website online can present a myriad of challenges to any organization - hardware, software, security, skilled personnel. By adopting our hosting and managed services, companies will keep their mission-critical operations running smoothly. You will benefit from our high levels of reliability, scalability, demand-based sizing and competitive pricing. Our hosting platforms support all the major technologies and come with unprecedented levels of allowable web space and web traffic

Email Hosting

We offer multiple levels of hosted email services offering value added services such as spam/phishing/virus filtering, cyberattack protection, distribution list creation, Microsoft Outlook integration, webmail access and mobile access

Domain Registration

We provide domain registration, renewal and transfer services to create your online identity. We are an accredited .mw registrar in Malawi

Systems Integration

We help organizations leverage on their existing software investments, sharing data from one system to another to produce an end-to-end solution in order to be competitive in their business environments. Our systems integration specialists utilize emerging technologies to integrate your existing systems resulting in turnkey solutions that prolong the value of existing systems. By connecting new solutions with existing ones, we transform the complete enterprise architecture into a single, seamless business system

CLIENTS

We continue to serve our clients spanning a wide range of sectors from government institutions to non-governmental organizations to privately owned companies, from small-scale businesses to large corporations. Examples of our satisfied clients include:
